

Mapping Unikernels with TAG based architectures

Akilan Selvacoumar

Mathematics and Computer Sciences
Heriot Watt University

Year 1 progression report of:
Doctor of Philosophy

October 2022

I would like to dedicate this thesis to my loving parents ...

Declaration

I hereby declare that except where specific reference is made to the work of others, the contents of this dissertation are original and have not been submitted in whole or in part for consideration for any other degree or qualification in this, or any other university. This dissertation is my own work and contains nothing which is the outcome of work done in collaboration with others, except as specified in the text and Acknowledgements. This dissertation contains fewer than 65,000 words including appendices, bibliography, footnotes, tables and equations and has fewer than 150 figures.

Nomenclature

Roman Symbols

F complex function

Greek Symbols

γ a simply closed curve on a complex plane

ι unit imaginary number $\sqrt{-1}$

π $\simeq 3.14\dots$

Superscripts

j superscript index

Subscripts

0 subscript index

crit Critical state

Other Symbols

\oint_{γ} integration around a curve γ

Acronyms / Abbreviations

ALU Arithmetic Logic Unit

BEM Boundary Element Method

CD Contact Dynamics

CFD Computational Fluid Dynamics

<i>CIF</i>	Cauchy's Integral Formula
CK	Carman - Kozeny
DEM	Discrete Element Method
DKT	Draft Kiss Tumble
DNS	Direct Numerical Simulation
EFG	Element-Free Galerkin
FEM	Finite Element Method
FLOP	Floating Point Operations
FPU	Floating Point Unit
FVM	Finite Volume Method
GPU	Graphics Processing Unit
LBM	Lattice Boltzmann Method
LES	Large Eddy Simulation
MPM	Material Point Method
MRT	Multi-Relaxation Time
PCI	Peripheral Component Interconnect
PFEM	Particle Finite Element Method
PIC	Particle-in-cell
PPC	Particles per cell
RVE	Representative Elemental Volume
SH	Savage Hutter
SM	Streaming Multiprocessors
USF	Update Stress First
USL	Update Stress Last

Chapter 1

Introduction

Chapter 2

Motivation

Chapter 3

Research Questions

Chapter 4

Literature Review

The literature review is split into 3 sections. The first section talks about the papers surveyed for Unikernels and the 2nd section talks about papers surveyed for TAG based architectures and the third sections talks about the possible incentives of combining them both which helps answer the research questions stated (TODO: Add reference to research question section).

4.1 TAG based architecture survey

The following was a survey conducted on exisisting TAG based implementations and the recent survey based on TAG based architectures (//TODO add survey reference) published in 2022 was a good staring point to understand about various implementations of TAG based architectures with the high level metrits and limitations. The following section provides our own version of the Survey to help decide the best implementations to answer the research questions (//TODO reference research questions chapter).

According to the TAG based architecture survey (//TODO add survey reference) there are 37 published efforts on TAG based architectures over the past decade and 20 published efforts preceding that.

4.1.1 Timder V

It is a tagged memory architecture for flexible and efficient isolation of code and data on small embedded systems. The TAG isolation is augmented with a memory protection unit to isolate induvidual processes. Timber V is compatible with exsisting code. The contributions of the paper are:

- Efficient tagged memory architecture for isolated execution on low-end processors.

- Concept introduced called stack interleaving that allows efficient and dynamic memory management.
- Lightweight shared memory between enclaves.
- Efficient shared MPU (i.e Memory Protection Unit) design.

4.1.2 ARM MTE

... and some more ...

4.1.3 D-RI5CY

4.1.4 TMDFI

4.1.5 HyperFlow

4.1.6 SDMP

4.1.7 Typed Architecture

4.1.8 Dover

4.1.9 Shakti-T

4.1.10 HDFI

4.1.11 lowRISC

4.1.12 Taxi

4.1.13 Pump

4.1.14 CHERI

4.1.15 SPARC M7/M8 SSM

4.1.16 Low-Fat Pointers

4.1.17 SAFE

4.1.18 DataSafe

4.1.19 Harmoni

4.1.20 Shioya, et al.

4.1.21 SIFT

4.1.22 FlexCore

4.1.23 Execution Leases

4.1.24 GLIFT

4.1.25 TIARA

4.1.26 DIFT Coprocessor

4.1.27 HardBound

Chapter 5

Experiments

Chapter 6

Research Goals

Chapter 7

Research Timeline

Chapter 8
